EXPERIENCE

Firescale Studios

Castellón, Spain

Unity / Gameplay Developer (C#)

Dec. 2024 – May 2026

- Architected modular gameplay systems for Rise of the Overlords using C#, Zenject, and ScriptableObjects, managing assets asynchronously via Addressables.
- Engineered an in-engine runtime cheat and debugging toolset to inspect game states and modify inventory parameters on the fly, streamlining QA reproduction workflows and reducing QA testing time by ~90%.
- Developed a custom Unity Editor localization plugin with inspector dropdowns and automated data validation, standardizing multi-language asset workflows.
- Profiled CPU bottlenecks and memory allocations using Unity Profiler and JetBrains dotTrace to maintain a stable 60 FPS target.

Catness Game Studios

Hybrid, Spain

Multiplayer & Gameplay Programmer (C++)

Jan. 2023 – Nov. 2024

- Implemented networked gameplay mechanics and abilities leveraging the Gameplay Ability System (GAS), replicated inventories, and synchronized world states in Unreal Engine 5.
- Conducted network stress testing and profiling on dedicated servers with ~25 concurrent players, optimizing actor replication frequencies, RPC overhead, and tick stability.
- Contributed to console porting pipelines for Sea Horizon (PS4/PS5, Xbox Series), resolving 30+ TRC/XR compliance issues, GDK integration, and performance targets.
- Diagnosed and resolved multiplayer synchronization edge cases, bandwidth bottlenecks, and state desyncs using Unreal Engine profiling tooling.

PROJECTS

Fractalia – Real-Time Fractal Exploration | *Unity, C#, HLSL* | Playable Demo | [Video](#) May 2025 – Nov. 2025

- Implemented real-time 3D fractal rendering in Unity using custom HLSL raymarching shaders and analytic Signed Distance Functions (SDFs), exposing dynamic parameter controls at runtime.
- Optimized distance estimator sphere tracing and step thresholds on GPU compute passes to achieve smooth, interactive framerates during procedural exploration.

Urban Traffic Simulation AI (Bachelor's Thesis) | *Unreal Engine, C++* | [Video](#) Jan. 2023 – June 2023

- Engineered an autonomous vehicle agent system in Unreal Engine using Finite State Machines (FSM) to simulate realistic traffic flow, intersection logic, and obstacle avoidance.
- Optimized agent update loops and spatial queries to support multiple simultaneous simulated entities without bottlenecking the main thread.

TECHNICAL SKILLS

Game Engines & Frameworks: Unreal Engine 5, Unity, Gameplay Ability System (GAS), Zenject, Addressables

Languages: C++, C#, HLSL, Python

Multiplayer & Networking: Client-Server Architecture, Dedicated Servers, Replication, RPCs, State Sync

Platforms & Compliance: PC (Windows), PlayStation 4/5, Xbox One/Series, Console Certification (TRC/XR), GDK

Tooling & Profiling: Perforce, Git, Rider, Visual Studio, Unity Profiler, dotTrace, Unreal Insights, Jira

EDUCATION

Universitat Jaume I

Castellón, Spain

Bachelor of Science in Design and Development of Video Games

Sept. 2019 – June 2023
